REJU-LIGHTINGTECH

Photodynamic therapy

REJU - LIGHTINGTECH

Photodynamic therapy

Application

- *Regrowing collagen.*
- *Smoothing microgrooves and wrinkles.*
- *Fading age spots, reducing solar skin damages.*
- *Decreasing the erythema and telangiectasia.*
- *Lightening skin pigmentation.*
- *Refining pores.*
- *Promoting blood circulation, improving skin conditions.*
- *Removing black eye.*

Advantage

- We start from the fact that the skin is sensitive to light energy. The LED visible light technology has direct action on the skin, with different actions depending on the color they emit (this color is determined by the different wavelengths). It's called photodynamic therapy.
- Using the new power system to adapt to the regions with changeable voltage. It has the stable output power, low power dissipation and can work continuously.
- The chromatic LCD display to show the treatment time, helping the physicians / operators master each course of treatment and save the time for treating / waiting.
